

Seemeglobal for Delivery

Seemeglobal for Delivery is a mobile application that helps delivery companies improve customer satisfaction by allowing their drivers to send a “See Me” link from their mobile phones to customer devices.

Your delivery driver can load a customer’s name and phone number into the app. With this information, they are able to send the “See Me” link to specific customers. When the delivery driver clicks on the “See Me” button on Seemeglobal’s map screen, the location-sharing link gets generated.

They can then send to the customer via:

- Text messaging
- WhatsApp
- Email
- Other message transmission channels.

When a customer clicks on the link, a map will appear on their device showing the location and movement of the delivery driver that is bringing an item to him or her. This enables the customer to:

- View the progress of the item being delivered to them.
- Have a better idea of the arrival time of their item.
- Communicate by phone with the delivery driver as needed, using the “Voice Call” feature

Add that Extra Dimension to Your Delivery Services and Delight Your Customers!

- The customer does not need to install the app to view the delivery driver’s location and movement.
- Both parties can communicate by phone as needed, using the “Voice Call” feature.
- Customer safety and privacy are protected. Once a delivery is completed, customer identity and contact details are deleted from the delivery driver’s device.
- Delivery time and details are captured. A copy of this information is transmitted to you and the customer.
